

# DATA AVAILABILITY FOR THE NEXT CENTURY

# NovaNet-WEB™

**PROFESSIONAL ONLINE BACKUP. SIMPLE, FAST AND RELIABLE.**

**NovaNet-WEB™ is the ideal software for providing data backup and availability services via the internet or intranet. Service providers can use NovaNet-WEB™ to offer private or business customers offsite and remote backup as a simple service.**

### **Ease-of-use is the Key to Successful IT Services**

NovaNet-WEB™ has been awarded numerous accolades for the design of its user interface and the range of functions the software provides. Private and business customers praise NovaNet-WEB™'s wizards which allow non-IT specialists to automate data backups in just a few clicks and recover data quickly. Backup services based on NovaStor technology require few resources to provide backup as a service that ensures high customer satisfaction.

### **Solutions Tailored for Private and Business Users**

NovaNet-WEB™ is available as NovaNet-WEB™ Standard and Advanced. While both support almost any Microsoft platform and operating system, NovaNet-WEB™ Advanced enables the use of Agents for Microsoft SQL and Exchange. ISPs may easily tailor backup services to the individual needs of either private or business users - for greater user satisfaction.

### **Reliable, High-speed Data Protection**

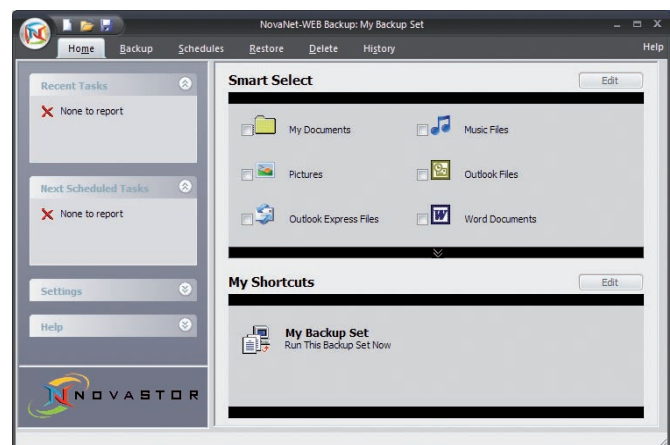

NovaNet-WEB™ reduces the size of data backups to deliver the fastest backup times possible using low bandwidth. With FastBIT™ technology, NovaNet-WEB™ implements the sector's most efficient backup software. FastBIT™ reduces the size of backups by up to 99%. A new storage algorithm adopted in version 7 further raises the all-over performance up to another 20%.

All of the backup processes are recorded in detailed logs. ISPs may easily provide reports at customers' request.

### **Scalability for Successful Companies**

IT service providers remain flexible with NovaNet-WEB™. In cases of high customer demand and fast growth, additional licenses or increased storage capacity can be added without any disruption to existing services.

Bandwidth throttling allows the efficient use of resources by limiting the bandwidth capacity. NovaNet-WEB™ also has a complete SOAP/XML account user interface that facilitates simple integration with the existing invoicing system. NovaNet-WEB™ offers remote client configuration. It permits backup client settings to be configured remotely from the backup server. Service providers and administrators receive direct control over remote clients.

NovaNet-WEB™ has been awarded numerous accolades for the design of its user interface and the range of functions the software provides.

### **Intelligent and Simple Backups from Any Location**

NovaNet-WEB™ allows users to quickly automate the backup of important files at an easy-to-use interface. In addition to allowing the selection of single files, files of a particular program and folders NovaNet-WEB™ features „smart selection“. The feature offers users easy identification of all files of a particular type, such as photos, emails, and personal documents, wherever they are stored on the hard drive.

„Smart selection“ reduces the technical knowledge required for professional data backup to a minimum, and speeds the identification of important data types for professionals.

NovaNet-WEB™ also tracks backup versions to ensure that recoveries of any version can be carried out quickly and easily at any time, anywhere.

#### Confidential and Secure

NovaNet-WEB™ uses advanced technologies and data protection industry standards to guarantee that their customers' data is protected. All data is encrypted, compressed and only then transferred via the internet.

#### Additional Language Support

NovaNet-WEB™ is available in a wide range of languages to simplify installation and use for users.

#### Professional Expert Support

NovaStor develops stable, user-friendly and extremely reliable software. Still, when technical support is needed, NovaStor is happy to answer any questions via e-mail or by telephone.

Based on individual agreements, NovaStor provides comprehensive technical support for detailed projects, maintenance and upgrade protection.

## NovaNet-WEB™: Features & Benefits

### Simplicity for ease-of-use

Intuitive interface	Easy-to-navigate wizards enable non-IT specialists to plan and install data backups quickly and effectively
Web-based restore	An online interface allows users to recover data at any time and from any location
Smart select	Identification of files of a particular type, such as photos or emails wherever they are stored on the user's hard drive Thus, the technical knowledge required for professional data backups is reduced to a minimum
Automation	NovaNet-WEB™ secures data automatically following the initial installation
Business Data	NovaNet-WEB™ Advanced provides Microsoft Exchange and SQL Agents to fulfill business customer needs

### Low use of resources

ACS	The Account Creation System enables the creation of individual online forms to request customer data. Entries are automatically transferred to the system database reducing the amount of resources necessary to operate the service
Low bandwidth	Using FastBIT™ technology reduces the size of backup files up to 99%. Backups can therefore be carried out quickly and simply using lower bandwidths
Central management	User groups and profiles can be managed centrally on the server quickly and easily. An integrated user authentication database eliminates the need for external authentication platforms, such as Active Directory or LDAP. Administration is facilitated and costs for the management of the NovaNet-WEB™ installation are reduced.
Bandwidth throttling	Limiting bandwidth usage per customer to employ resources more efficiently

### System Requirements (Standard & Advanced)

Server	Pentium III or higher CPU, 512 MB RAM or greater, minimum 8 GB Hard Disk (minimum 2 independent drives), TCP/IP Network, .NET 2.0 Framework, Internet Explorer 6.0 or higher
Client	Pentium III or higher CPU, 128 MB RAM or greater, 500 MB Disk Space plus space required for processing, TCP/IP Network, Internet Explorer 6.0 or higher

### Operating Systems (Standard & Advanced)

Server	Microsoft Windows 2000 Server SP4/Advanced Server SP4, Microsoft Windows Server 2003 Standard/ Enterprise SP1 (or greater) (32/64 Bit), Connectivity to Microsoft SQL2000, SQL2005 or SQLEXPRESS
Client	Microsoft Windows XP SP2 (32/64 Bit), Microsoft Windows 2000 Professional/Server/Advanced Server SP4, Microsoft Windows Server 2003 Standard/SBS 2003/Enterprise SP1 (or greater) (32/64 Bit), Microsoft Windows Vista Home Basic/Home Premium/Business/Enterprise/Ultimate (32/64 Bit)
System State	Microsoft Windows 2000 Server SP4/2003/2003 R2

### Client Agents (NovaNet-WEB™ Advanced only)

SQL Agent	Microsoft SQL 2000/2005/MSDE/Express on Microsoft Windows XP SP2/2000 Server SP4/2003/2003 R2
Exchange Agent	Microsoft Exchange 2000/2003 on Microsoft Windows 2000 Server SP4/2003/2003 R2
